INDEX TO AUTHORS.

A

Addis, T., MacKay, Eaton M., and **MacKay, Lois Lockard.** The effect on the kidney of the long continued administration of diets containing an excess of certain food elements. I. Excess of protein and cystine, 139
—, —, and —. II. Excess of acid and of alkali, 157
Anderson, R. J. Properties of cholesterol obtained from different sources, 407
—, **Nabenhauer, Fred P.,** and **Shriner, R. L.** The distribution of dihydrositosterol in plant fats, 389
— and **Shriner, R. L.** The reduction products of certain plant sterols, 401

B

Balls, A. K. Concerning pseudomorphine, 537
—. The separation and estimation of morphine, pseudomorphine, and related substances, 543
Bass, Lawrence W. See LEVENE and BASS, 167
Baudisch, Oskar, and **Davidson, David.** Catalytic oxidation by means of complex iron salts, 501
— and —. The oxidation of 5-aminouracil, 497
Baumann, Emil J., and **Kurland, Sarah.** Changes in the inorganic constituents of blood in suprarenalectomized cats and rabbits, 281
Beadles, Jessie R. See MITCHELL and BEADLES, 429
—. See MITCHELL, BEADLES, and KEITH, 15
Beard, Howard H. The nutritive value of plastein, 477
Briggs, A. P. Some observations bearing on the rôle of acetaldehyde in animal metabolism, 67

C

Cannon, Helen C. See OSBORNE, MENDEL, PARK, and WINTERNITZ, 317
Cave, H. W. See HUGHES, FITCH, CAVE, and RIDDELL, 309
Clark, Guy W. See UPDEGRAFF, GREENBERG, and CLARK, 87
Cole, William H. The pyridine test as a quantitative method for the estimation of minute amounts of chloroform, 173

D

Davidson, David. See BAUDISCH and DAVIDSON, 497, 501

XUM

Denis, W., and **Reed, Lucille.** Methods for the determination of some of the nonprotein sulfur compounds of blood, 191
— and —. Nephelometric methods for the determination of some sulfur compounds in urine, 205

E

Eagle, H. S. On the nature of the urine sugars, 481
Eisenman, Anna J. The effect of potassium oxalate on electrolytes of blood and plasma, 587
—. A gasometric method for the determination of pH in blood, 611
—. Method for anaerobic defibrination of blood, 607
Elvehjem, C. A., Herrin, R. C., and **Hart, E. B.** Iron in nutrition. III. The effects of diet on the iron content of milk, 255

F

Fitch, J. B. See HUGHES, FITCH, CAVE, and RIDDELL, 309
Forbes, J. C. The purification of pepsin, its properties, and physical characters, 559

G

Gamble, Clarence James. See STARR and GAMBLE, 509
Gibbs, H. D. Phenol tests. II. Nitrous acid tests. The Millon and similar tests. Spectrophotometric investigations, 445
Goldblatt, H., and **Moritz, Alan R.** On the growth-promoting property of irradiated fat in the diet, of direct irradiation, and of cod liver oil, 127
Greenberg, David M. See UPDEGRAFF, GREENBERG, and CLARK, 87

H

Haller, H. L. See LEVENE, WALTI, and HALLER, 465
Hamilton, T. S. See MITCHELL, ZIMMERMAN, and HAMILTON, 379
Hart, E. B., Steenbock, H., Kletzien, S. W., and **Scott, H.** Dietary factors influencing calcium assimilation. IX. Further observations on the influence of cod liver oil on calcium assimilation in lactating animals, 271
—, —, **Scott, H.,** and **Humphrey, G. C.** Dietary factors influencing calcium assimilation. VIII. The calcium level and sunlight as affecting calcium equilibrium in milking cows, 263
—. See ELVEHJEM, HERRIN, and HART, 255
Hart, Merrill C. See TOURTELLOTTE and HART, 1
Hastings, A. Baird, Murray, Cecil D., and **Sendroy, Julius, Jr.** Studies of the solubility of calcium salts. I. The solubility of calcium carbonate in salt solutions and biological fluids, 723
—. See SENDROY and HASTINGS, 783, 797
Herrin, R. C. See ELVEHJEM, HERRIN, and HART, 255

Hughes, J. S., Fitch, J. B., Cave, H. W., and **Riddell, W. H.** Relation between the vitamin C content of a cow's ration and the vitamin C content of its milk, 309

Humphrey, G. C. See HART, STEENBOCK, SCOTT, and HUMPHREY, 263

I

Illievitz, A. B. The presence of an unknown substance in diabetes insipidus urine, 693

Izume, Seiichi, and **Lewis, Howard B.** The influence of hydrazine and its derivatives on metabolism. III. The mechanism of hydrazine hypoglycemia, 51

—. See LEWIS and IZUME, 33

J

Jackson, Deborah. See OSBORNE, MENDEL, PARK, and WINTERNITZ, 317

K

Karelitz, Samuel. See SHOHL and KARELITZ, 119

Katayama, Ichiro, and **Killian, John A.** Changes in the sugar, inorganic phosphorus, and lactic acid of animal and human blood after administration of insulin and of glucose, 707

Keith, M. Helen. See MITCHELL, BEADLES, and KEITH, 15

Killian, John A. See KATAYAMA and KILLIAN, 707

Kletzien, S. W. See HART, STEENBOCK, KLETZIEN, and SCOTT, 271

Kramer, Benjamin, Kramer, Sidney D., Shelling, David H., and **Shear, M. J.** Cod liver oil concentrate. Its value as an antirachitic agent when injected subcutaneously, 699

—, **Shear, M. J.,** and **Shelling, David H.** Fractionation of irradiated cholesterol. II. Antirachitic potency of the fractions, 221

—. See SHEAR and KRAMER, 213

Kramer, Sidney D. See KRAMER, KRAMER, SHELLING, and SHEAR, 699

Kurland, Sarah. See BAUMANN and KURLAND, 281

L

Levene, P. A., and **Bass, Lawrence W.** The action of hydrazine hydrate on uridine, 167

— and **Sobotka, Harry.** Deamination of 3-aminohexoses, 181

— and —. Lactone formation of lacto- and maltobionic acids and its bearing on the structure of lactose and maltose, 471

— and **Walti, A.** Note on the action of ammonia on propylene oxide, 461

—, —, and **Haller, H. L.** The configurational relationship of dextro-methylethyl carbinol to dextro-lactic acid, 465

Lewis, Howard B., and **Izume, Seiichi.** The influence of hydrazine and its derivatives on metabolism. II. Changes in the non-protein nitrogenous constituents of the blood

and in the metabolism of injected glycine in hydrazine intoxication, 33

Lewis, Howard B. See IZUME and LEWIS, 51

Luce, Ethel M. Glass screens for the transmission of the light radiations curative of rickets, 187

M

MacKay, Eaton M. See ADDIS, MACKAY, and MACKAY, 139, 157

MacKay, Lois Lockard. See ADDIS, MACKAY, and MACKAY, 139, 157

Matsuda, Yoshimi. A biochemical study of tooth growth, 437

Mendel, Lafayette B. See OSBORNE, MENDEL, PARK, and WINTERNITZ, 317

Miriam, S. R., Wolf, J. T., and **Sherwin, Carl P.** Comparative metabolism of certain aromatic acids. XI. Fate of diphenylactic acid in the animal body, 249

—, —, and —. XII. Fate of triphenylactic acid, also triphenylmethane, and triphenylcarbinol in the animal body, 695

Mitchell, H. H., and **Beadles, Jessie R.** The protein value in nutrition of beef liver, beef heart, and beef kidney, 429

—, —, and **Keith, M. Helen.** The value of cocoa and chocolate as sources of protein in the diet, 15

—, **Zimmerman, R. L.,** and **Hamilton, T. S.** The determination of the amount of connective tissue in meat, 379

INDEX TO SUBJECTS.

A

Acetaldehyde:
Metabolism, animal (Briggs) 67

Acid(s):
Excess in diet, kidney effect, long continued administration (Addis, MacKay, and MacKay) 157

Air:
Ethyl iodide determination in minute amounts, silver nitrate reaction (Starr and Gamble) 509

Alkali:
Excess in diet, kidney effect, long continued administration (Addis, MacKay, and MacKay) 157

3-Aminohexoses:
Deamination (Levene and Sobotka) 181

5-Aminouracil:
Oxidation (Baudisch and Davidson) 497

Ammonia:
Propylene oxide acted upon by (Levene and Walti) 461

Aromatic acid(s):
Metabolism. XI (Miriam, Wolf, and Sherwin) 249
—. XII (Miriam, Wolf, and Sherwin) 695

Assimilation:
Calcium, cod liver oil, influence in lactating animals (Hart, Steenbock, Kletzien, and Scott) 271
—, dietary factors influencing. VIII (Hart, Steenbock, Scott, and Humphrey) 263
—, — — —. IX (Hart, Steenbock, Kletzien, and Scott) 271

B

Beef:
Heart, protein value in nutrition (Mitchell and Beadles) 429
Kidney, protein value in nutrition (Mitchell and Beadles) 429
Liver, protein value in nutrition (Mitchell and Beadles) 429

Bile:
Fecal lipids, relation, and sterol metabolism (Sperry) 351

Biochemistry:
Tooth growth (Matsuda) 437

Biology:
Calcium carbonate solubility in biological fluids (Hastings, Murray, and Sendroy) 723

Biology—*continued:*
Calcium phosphate, tertiary, solubility in biological fluids (SENDROY and HASTINGS) 783
Blood:
Defibrination, anaerobic (EISENMAN) 607
Electrolytes, potassium oxalate, effect (EISENMAN) 587
Ethyl iodide determination in minute amounts, silver nitrate reaction (STARR and GAMBLE) 509
Flow, ethyl iodide determination (STARR and GAMBLE) 509
Hydrogen ion concentration, gasometric determination (EISENMAN) 611
Inorganic constituents, suprarenalectomy, changes (BAUMANN and KURLAND) 281
— phosphorus, insulin and glucose administration, changes after, animal and human (KATAYAMA and KILLIAN) 707
Lactic acid, insulin and glucose administration, changes after, animal and human (KATAYAMA and KILLIAN) 707
Nitrogen, non-protein, changes in hydrazine intoxication (LEWIS and IZUME) 33
Serum, normal, calcium, diffusible and non-diffusible, distribution (UPDEGRAFF, GREENBERG, and CLARK) 87
Blood—*continued:*
Sugar, insulin and glucose administration, changes after, animal and human (KATAYAMA and KILLIAN) 707
Sulfur, non-protein compounds, determination (DENIS and REED) 191

C

Calcium:
Assimilation, dietary factors influencing. VIII (HART, STEENBOCK, SCOTT, and HUMPHREY) 263
—, — — —. IX (HART, STEENBOCK, KLETZIEN, and SCOTT) 271
—, lactating animals, cod liver oil, influence (HART, STEENBOCK, KLETZIEN, and SCOTT) 271
Blood serum, normal, diffusible and non-diffusible, distribution (UPDEGRAFF, GREENBERG, and CLARK) 87
Diffusible and non-diffusible, blood serum, normal, distribution (UPDEGRAFF, GREENBERG, and CLARK) 87
Equilibrium, calcium level affecting, in milking cows (HART, STEENBOCK, SCOTT, and HUMPHREY) 263
—, sunlight affecting, in milking cows (HART, STEENBOCK, SCOTT, and HUMPHREY) 263

Calcium—*continued:*
Level, calcium equilibrium in milking cows, effect (HART, STEENBOCK, SCOTT, and HUMPHREY) 263
Salts, solubility. I (HASTINGS, MURRAY, and SENDROY) 723
—, —. II (SENDROY and HASTINGS) 783
—, —. III (SENDROY and HASTINGS) 797
Calcium carbonate:
Solubility (SENDROY and HASTINGS) 797
— in biological fluids (HASTINGS, MURRAY, and SENDROY) 723
— — salt solutions (HASTINGS, MURRAY, and SENDROY) 723
Calcium phosphate:
Tertiary, solubility (SENDROY and HASTINGS) 797
—, — in biological fluids (SENDROY and HASTINGS) 783
—, — — salt solutions (SENDROY and HASTINGS) 783
Carbon dioxide:
Tension of cerebrospinal fluid (SHOHL and KARELITZ) 119
Catalysis:
Iron salts, complex, catalytic oxidation by (BAUDISCH and DAVIDSON) 501
Cerebrospinal fluid:
See Fluid.
Chloroform:
Pyridine test for quantitative estimation of minute amounts (COLE) 173
Chocolate:
Protein source in diet (MITCHELL, BEADLES, and KEITH) 15
Cholesterol:
Irradiated, fractionation. I (SHEAR and KRAMER) 213
—, —. II (KRAMER, SHEAR, and SHELLING) 221
Properties, from different sources (ANDERSON) 407
Cocoa:
Protein source in diet (MITCHELL, BEADLES, and KEITH) 15
Cod liver oil:
Calcium assimilation in lactating animals, influence (HART, STEENBOCK, KLETZIEN, and SCOTT) 271
Concentrate, antirachitic value, subcutaneously injected (KRAMER, KRAMER, SHELLING, and SHEAR) 699
Growth-promoting property (GOLDBLATT and MORITZ) 127
Colorimeter:
Correction curves (WRIGHT) 209
Cystine:
Excess in diet, kidney effect, long continued administration (ADDIS, MACKAY, and MACKAY) 139

D

Deamination:
3-Aminohexoses (LEVENE and SOBOTKA) 181
Defibrination:
Blood, anaerobic (EISENMAN) 607

Dextro-lactic acid:
Dextro-methylethyl carbinol, configurational relationship (LEVENE, WALTI, and HALLER) 465

Dextro-methylethyl carbinol:
Dextro-lactic acid, configurational relationship (LEVENE, WALTI, and HALLER) 465

Diabetes:
Insipidus, urine, unknown substance (ILLIEVITZ) 693

Diet:
Acid excess, kidney effect, long continued administration (ADDIS, MACKAY, and MACKAY) 157
Alkali excess, kidney effect, long continued administration (ADDIS, MACKAY, and MACKAY) 157
Calcium assimilation, dietary factors influencing. VIII (HART, STEENBOCK, SCOTT, and HUMPHREY) 263
— —, — — —. IX (HART, STEENBOCK, KLETZIEN, and SCOTT) 271
Chocolate as protein source (MITCHELL, BEADLES, and KEITH) 15
Cocoa as protein source (MITCHELL, BEADLES, and KEITH) 15
Cystine excess, kidney effect, long continued administration (ADDIS, MACKAY, and MACKAY) 139

Diet—*continued:*
Fat, irradiated, growth-promoting property (GOLDBLATT and MORITZ) 127
Inorganic salts, unusually rich, physiological effect (OSBORNE, MENDEL, PARK, and WINTERNITZ) 317
Iron content of milk, effect (ELVEHJEM, HERRIN, and HART) 255
Kidney, excess of certain food elements, effect of long continued administration. I (ADDIS, MACKAY, and MACKAY) 139
—, — — — food elements, effect of long continued administration. II (ADDIS, MACKAY, and MACKAY) 157
Protein excess, kidney effect, long continued administration (ADDIS, MACKAY, and MACKAY) 139
—, unusually rich, physiological effect (OSBORNE, MENDEL, PARK, and WINTERNITZ) 317
Vitamin C content, and of milk, relation (HUGHES, FITCH, CAVE, and RIDDELL) 309

Dihydrositosterol:
Plant fats, distribution (ANDERSON, NABENHAUER, and SHRINER) 389

Diphenylacetic acid:
Animal body, fate (MIRIAM, WOLF, and SHERWIN) 249

E

Electrolyte:
Blood, potassium oxalate, effect (EISENMAN) 587
Plasma, potassium oxalate, effect (EISENMAN) 587

Equilibrium:
Calcium, milking cows, calcium level and sunlight, effect (HART, STEENBOCK, SCOTT, and HUMPHREY) 263

Ethyl iodide:
Blood flow determination (STARR and GAMBLE) 509
Silver nitrate reaction with, for determination of minute amounts in air, water, and blood (STARR and GAMBLE) 509

Excretion:
Lipid. IV (SPERRY) 351

F

Fat:
Irradiated, growth-promoting property (GOLDBLATT and MORITZ) 127
Ovarian residue (TOURTELLOTTE and HART) 1
Plant, dihydrositosterol, distribution (ANDERSON, NABENHAUER, and SHRINER) 389

Feces:
Lipids, bile, relation, and sterol metabolism (SPERRY) 351

Findlay and Sharpe:
Picrate from normal urine (WHITE) 419

Fluid:
Biological, calcium carbonate solubility (HASTINGS, MURRAY, and SENDROY) 723
—, — phosphate, tertiary, solubility (SENDROY and HASTINGS) 783
Cerebrospinal, carbon dioxide tension (SHOHL and KARELITZ) 119

G

Gas:
Blood, hydrogen ion concentration, gasometric determination (EISENMAN) 611
Inert, protein solution, hydration, relation (STODDARD) 629
Nitrogen, gasometric micro-Kjeldahl determination (VAN SLYKE) 235

Gelatin:
Hydrolysates, specific dynamic action (RAPPORT) 75

Glass:
Screens transmitting light radiations curative of rickets (LUCE) 187

Glucose:
Lactic acid, animal and human blood, changes after administration (KATAYAMA and KILLIAN) 707
Phosphorus, inorganic, animal and human blood, changes after administration (KATAYAMA and KILLIAN) 707
Sugar, animal and human blood, changes after administration (KATAYAMA and KILLIAN) 707

Glycine:
Metabolism, injected, hydrazine intoxication (Lewis and Izume) 33
Growth:
Cod liver oil, growth-promoting property (Goldblatt and Moritz) 127
Irradiated fat, growth-promoting property (Goldblatt and Moritz) 127
Irradiation, direct, growth-promoting property (Goldblatt and Moritz) 127
Tooth, biochemistry (Matsuda) 437

H

Heart:
Beef, protein value in nutrition (Mitchell and Beadles) 429
Histidine:
Compound (Vickery) 303
Hydration:
Protein, inert gases in solution, relation (Stoddard) 629
Hydrazine:
Derivatives, metabolism, influence. II (Lewis and Izume) 33
—, —, —. III (Izume and Lewis) 51
Hydrate, action on uridine (Levene and Bass) 167
Hypoglycemia (Izume and Lewis) 51
Intoxication, metabolism of injected glycine (Lewis and Izume) 33
Hydrazine—*continued:*
Metabolism, influence. II (Lewis and Izume) 33
—, —. III (Izume and Lewis) 51
Hydrogen:
Ion concentration, blood, gasometric determination (Eisenman) 611
Hydrolysate:
Gelatin, specific dynamic action (Rapport) 75
Hypoglycemia:
Hydrazine (Izume and Lewis) 51

I

Inorganic:
Blood constituents, suprarenalectomy, changes (Baumann and Kurland) 281
Phosphorus, blood, insulin and glucose administration, changes after, animal and human (Katayama and Killian) 707
Salts, diet, unusually rich, physiological effect (Osborne, Mendel, Park, and Winternitz) 317
Insulin:
Lactic acid, animal and human blood, changes after administration (Katayama and Killian) 707
Phosphorus, inorganic, animal and human blood, changes after administration (Katayama and Killian) 707

Insulin—*continued:*
Sugar, animal and human blood, changes after administration (KATAYAMA and KILLIAN) 707
Intoxication:
Hydrazine, blood non-protein nitrogen, changes (LEWIS and IZUME) 33
—, injected glycine, metabolism (LEWIS and IZUME) 33
Ion:
Hydrogen, concentration, blood, gasometric determination (EISENMAN) 611
Iron:
Milk, affected by diet (ELVEHJEM, HERRIN, and HART) 255
Nutrition. III (ELVEHJEM, HERRIN, and HART) 255
Salts, complex, catalytic oxidation by (BAUDISCH and DAVIDSON) 501
Irradiation:
Cholesterol, fractionation. I (SHEAR and KRAMER) 213
—, —. II (KRAMER, SHEAR, and SHELLING) 221
Direct, growth-promoting property (GOLDBLATT and MORITZ) 127
Fat, growth-promoting property (GOLDBLATT and MORITZ) 127

K

Kidney:
Acid excess in diet, long continued administration, effect (ADDIS, MACKAY, and MACKAY) 157
Kidney—*continued:*
Alkali excess in diet, long continued administration, effect (ADDIS, MACKAY, and MACKAY) 157
Beef, protein value in nutrition (MITCHELL and BEADLES) 429
Cystine excess in diet, long continued administration, effect (ADDIS, MACKAY, and MACKAY) 139
Diets containing excess of certain food elements, long continued administration, effect. I (ADDIS, MACKAY, and MACKAY) 139
— — — — certain food elements, long continued administration, effect. II (ADDIS, MACKAY, and MACKAY) 157
Protein excess in diet, long continued administration, effect (ADDIS, MACKAY, and MACKAY) 139
Kjeldahl:
Micro-, gasometric, nitrogen determination (VAN SLYKE) 235

L

Lactation:
Calcium assimilation, cod liver oil, influence (HART, STEENBOCK, KLETZIEN, and SCOTT) 271
Lactic acid:
Blood, insulin and glucose administration, changes after, animal and human (KATAYAMA and KILLIAN) 707

Lactobionic acid:
Lactone formation, bearing on structure of lactose (LEVENE and SOBOTKA) 471
Lactone:
Formation of lactobionic acid, lactose structure, bearing on (LEVENE and SOBOTKA) 471
— — maltobionic acid, maltose structure, bearing on (LEVENE and SOBOTKA) 471
Lactose:
Structure, lactone formation of lactobionic acid, bearing on (LEVENE and SOBOTKA) 471
Light:
Radiations curative of rickets, glass screens transmitting (LUCE) 187
Lipid:
Excretion. IV (SPERRY) 351
Fecal, bile, relation, and sterol metabolism (SPERRY) 351
Liver:
Beef, protein value in nutrition (MITCHELL and BEADLES) 429

M

Maltobionic acid:
Lactone formation, bearing on structure of maltose (LEVENE and SOBOTKA) 471
Maltose:
Structure, lactone formation of maltobionic acid, bearing on (LEVENE and SOBOTKA) 471
Meat:
Connective tissue, determination (MITCHELL, ZIMMERMAN, and HAMILTON) 379
Metabolism:
Acetaldehyde, animal (BRIGGS) 67
Aromatic acids. XI (MIRIAM, WOLF, and SHERWIN) 249
— —. XII (MIRIAM, WOLF, and SHERWIN) 695
Glycine, injected, hydrazine intoxication (LEWIS and IZUME) 33
Hydrazine and derivatives, influence. II (LEWIS and IZUME) 33
— — —, —. III (IZUME and LEWIS) 51
Sterol, bile and fecal lipids, relation (SPERRY) 351
Milk:
Calcium equilibrium affected by calcium level and sunlight in milking cows (HART, STEENBOCK, SCOTT, and HUMPHREY) 263
Iron content, affected by diet (ELVEHJEM, HERRIN, and HART) 255
Vitamin C content of, and ration, relation in cow (HUGHES, FITCH, CAVE, and RIDDELL) 309
Millon:
Phenol test (GIBBS) 445
Morphine:
Separation and estimation (BALLS) 543

N

Nephelometer:
Sulfur compounds, urine (DENIS and REED) 205

Nitrogen:
Blood, non-protein, changes in hydrazine intoxication (LEWIS and IZUME) 33
Kjeldahl, micro-, gasometric determination (VAN SLYKE) 235

Nitrous acid:
Phenol test (GIBBS) 445

Nutrition:
Beef liver, heart, kidney, nutritional value (MITCHELL and BEADLES) 429
Iron. III (ELVEHJEM, HERRIN, and HART) 255
Plastein (BEARD) 477
Protein of beef liver, heart, and kidney (MITCHELL and BEADLES) 429

O

Oil:
Cod liver. *See* Cod liver oil.

Ovary:
Chemistry. XI (TOURTELLOTTE and HART) 1
Fat of residue (TOURTELLOTTE and HART) 1

Oxidation:
5-Aminouracil (BAUDISCH and DAVIDSON) 497

Oxidation—*continued:*
Catalytic, by complex iron salts (BAUDISCH and DAVIDSON) 501

P

Pepsin:
Purification, properties, and physical character (FORBES) 559

Phenol:
Tests. II (GIBBS) 445

Phosphorus:
Inorganic, blood, insulin and glucose administration, changes after, animal and human (KATAYAMA and KILLIAN) 707

Physiology:
Inorganic salts, diets unusually rich in, physiological effect (OSBORNE, MENDEL, PARK, and WINTERNITZ) 317
Protein, diets unusually rich in, physiological effect (OSBORNE, MENDEL, PARK, and WINTERNITZ) 317

Picrate:
Urine, normal, Findlay and Sharpe method (WHITE) 419

Plant:
Fats, dihydrositosterol, distribution (ANDERSON, NABENHAUER, and SHRINER) 389
Sterols, reduction products (ANDERSON and SHRINER) 401

Plasma:
Electrolytes, potassium oxalate, effect (EISENMAN) 587

Plastein:
Nutritive value (Beard) 477
Potassium:
Oxalate, electrolytes of blood and plasma, effect (Eisenman) 587
Propylene oxide:
Ammonia action on (Levene and Walti) 461
Protein:
Beef liver, heart, kidney, nutritional value (Mitchell and Beadles) 429
Chocolate (Mitchell, Beadles, and Keith) 15
Cocoa (Mitchell, Beadles, and Keith) 15
Diet, unusually rich, physiological effect (Osborne, Mendel, Park, and Winternitz) 317
Excess in diet, kidney effect, long continued administration (Addis, MacKay, and MacKay) 139
Hydration in solution, inert gases, relation (Stoddard) 629
Solutions, activity. I (Stoddard) 629
Pseudomorphine:
(Balls) 537
Separation and estimation (Balls) 543
Pyridine:
Test, chloroform, minute amounts, quantitative estimation (Cole) 173

R

Radiation:
Glass screens transmitting light curative of rickets (Luce) 187
Rickets-curing, glass screens transmitting light (Luce) 187
Reduction:
Sterols, plant, products (Anderson and Shriner) 401
Rickets:
Cod liver oil concentrate, antirachitic value, subcutaneously injected (Kramer, Kramer, Shelling, and Shear) 699
Irradiated cholesterol, antirachitic potency (Kramer, Shear, and Shelling) 221
Light radiation curative of, glass screens transmitting (Luce) 187

S

Salt(s):
Calcium, solubility. I (Hastings, Murray, and Sendroy) 723
—, —. II (Sendroy and Hastings) 783
—, —. III (Sendroy and Hastings) 797
Inorganic, diets unusually rich in, physiological effect (Osborne, Mendel, Park, and Winternitz) 317
Iron, complex, catalytic oxidation by (Baudisch and Davidson) 501

Salt(s)—*continued:*
Solutions, calcium carbonate solubility (HASTINGS, MURRAY, and SENDROY) 723
—, — phosphate, tertiary, solubility (SENDROY and HASTINGS) 783
Screen:
Glass, transmitting light radiations curative of rickets (LUCE) 187
Serum:
Blood, normal, calcium, diffusible and nondiffusible, distribution (UPDEGRAFF, GREENBERG, and CLARK) 87
Silver nitrate:
Ethyl iodide, reaction, determination of minute amounts in air, water, and blood (STARR and GAMBLE) 509
Specific dynamic action:
Gelatin hydrolysates (RAPPORT) 75
Spectrophotometry:
Phenol determination (GIBBS) 445
Sterol:
Metabolism, bile and fecal lipids, relation (SPERRY) 351
Plant, reduction products (ANDERSON and SHRINER) 401
Sugar:
Blood, insulin and glucose administration, changes after, animal and human (KATAYAMA and KILLIAN) 707
Urine, nature (EAGLE) 481
Sulfur:
Non-protein, blood, determination (DENIS and REED) 191
Urine, nephelometric determination (DENIS and REED) 205
Sunlight:
Calcium equilibrium in milking cows, effect (HART, STEENBOCK, SCOTT, and HUMPHREY) 263
Suprarenalectomy:
Blood, inorganic constituents, changes (BAUMANN and KURLAND) 281

T

Tissue:
Connective, meat, determination (MITCHELL, ZIMMERMAN, and HAMILTON) 379
Tooth:
Growth, biochemistry (MATSUDA) 437
Triphenylacetic acid:
Animal body, fate (MIRIAM, WOLF, and SHERWIN) 695
Triphenylcarbinol:
Animal body, fate (MIRIAM, WOLF, and SHERWIN) 695
Triphenylmethane:
Animal body, fate (MIRIAM, WOLF, and SHERWIN) 695

U

Uridine:
Hydrazine hydrate action on (LEVENE and BASS) 167

Urine:
Diabetes insipidus, unknown substance (Illievitz) 693
Picrate, Findlay and Sharpe method (White) 419
Sugars, nature (Eagle) 481
Sulfur compounds, nephelometric determination (Denis and Reed) 205

V

Vitamin(s):
C content of cow's ration and milk, relation (Hughes, Fitch, Cave, and Riddell) 309

W

Water:
Ethyl iodide determination in minute amounts, silver nitrate reaction (Starr and Gamble) 509
